

News - French meeting on Data Warehousing and OLAP

Written by Administrator

During the 8th French meeting on Data Warehousing and OLAP (EDA'12), organized by LaBRI in June 12th and 13th 2012, Franck Duluc talked about SIMID and more generally the problems related to the data management in the field of aircraft maintenance.

The participants enjoyed the conference. The technological challenges addressed in the project allowed to have many discussions between researchers and our speaker. Everyone seems satisfied with this exchange that we hope will allow SIMID good to have echoes in the scientific and technical communities.

Thank you to LaBRI for the organization and thank you to Frank Duluc for his intervention.
